

# Bakersfield, CA

## Description

Three (3) Waste Hauler Access Stations are provided with one dedicated for receiving grease loads.

Two (2) Huber Units screen, wash and dewater unloaded waste.

Mag. Stripe Access card used to identify valid User and open discharge valve.

Receipt is printed for User with Journal copy rolled up inside Hauler Station.

Truck, Station, Ticket No., Date & Time, Alarm ID, Volume, Measured pH and Waste ID is logged.

Plant #2 and Plant #3 are 8 miles apart with 3 PortALogic hauler stations each. All data from the hauler stations is captured by PortALogic and can be viewed on the administrator's office computer in real time.

## PortALogic Server used to:

- 1 Communicate with Stations
- 2 Upload logged Data
- 3 Set Date and Time
- 4 Generate Raw Data Report
- 5 Download Operating Parameters & Alarm Set Points To Hauler Stations
