

New Bedford, MA

Description

New Septage Receiving Facility with Huber Screen and PortALogic Hauler Access Station replaces weigh in/out and un-screened manhole discharges.

PortALogic Software accurately measures volume that previously was estimated on a weight basis.

Administrator views real-time activity at remote office and monitors equipment status using HMI interface.

Huber's Rotamat screen handles septage and grit from haulers and allows unloading with minimal wait times for haulers.

PortALogic software manages up to 500 contract basis haulers with features that allow a hauler to work with many different customers.

Excessive flow monitor built into logic that will annunciate horn and close valve on excessive flow rates. Feature allows haulers to pressurize and minimize unload times without overloading equipment.

Multiple Waste Types and Waste Rates allowed. Specific waste rate can be assigned to a Customer's Account.
