

Port Charlotte, FL

Description

This 10+ year old Septage Receiving Facility was recently retrofitted with Two (2) New Stainless Steel hauler stations and PortALogic 2.0 Software.

Only authorized Haulers can Access the system. To logon, a Hauler enters Truck ID and a PIN that was assigned during the PortALogic Setup Process.

The septage receiving system is configured to accept Septage Only at Station 1 and Septage + Grease at Station 2. Equipment operation and valve adjust automatically to accept the type of waste entered by the hauler during the logon process.

Stations communicate via Ethernet to the Server PC located in the Main Office. Three (3) PortALogic Client applications are installed for the administration PCs and a Forth is installed on a PC at the remote billing department location. No additional charge is required for multiple installations of the software!

System is configured to allow each customer's credit. A debit based option is available should a customer not maintain the credit balance.

The PortALogic system has proven to be the right solution for this large volume facility.
